COMPANY

INTRODUCTION

There are queues at hospitals and a shortage of doctors. On the other hand, the number of paid clinics is growing rapidly. Private clinics have more access to the most recent and cutting-edge medical equipment.

Private clinics allows the doctor to fully realize his potential, and the patient to receive high-quality medical services in the shortest possible time. Time is money, and we value our client's time, nerves and money. In private clinics, the doctor has the opportunity for creativity, because each patient can be given more time. And in the governments clinic, there are usually queues. Private clinics make sure that the quality of service is at a high level.

“KLINIK HARAMAIN” is a wide-profile medical center for adults and children, providing a large number of diagnostic, therapeutic and preventive services for various types of diseases. We strive for perfection, therefore only highly qualified medical personnel work in our clinic, and the basis is impeccable service and modern medical equipment from the world's leading manufacturers.

“KLINIK HARAMAIN” is a competitive organisation with a patient-centered medical care system based on national quality and management standards, science, education, and innovative leadership.

COMPANY HISTORY

In April, 2015 **“KLINIK HARAMAIN”** become part of Malaysia healthcare industry as a paid healthcare provider. Starting with a few healthcare services, our clinic today provides a wider range of treatment for adults and children.

“KLINIK HARAMAIN” was founded by Dr. Muhammad Za'im bin Asniel, a medical practitioner holds a Doctor of Medicine (MD) degree from Universiti Sains Malaysia (USM). With over 7 years of expertise in medicine and working experience in government hospitals, government and private clinics, he has successfully driven the growth of the clinic in offering the best services to over thousands of people seeking treatment since its establishment.

Customers and patients can book medical consultation slot in advance on our website for their convenience. Customers can also purchase health-related items from our online store. Our clinic has been open 24 hours a day, seven days a week since Mac 2022. This is to meet the ever-increasing demand of our patients.

The goal of our establishment is to promote the health of the residents who live in the clinic's surrounding area, to ensure sustainable socio-demographic development of the region, in compliance with the principles of universal coverage of the population, social justice, quality medical care and joint responsibility for health.

COMPANY PRINCIPLES

MISSION

Patients' needs are met through high-quality, patient-centered medical care.

VISION

Further development of primary health care, aimed at the development of universal, integrated, socially oriented, affordable and high-quality medical care at the primary level.

BUSINESS DETAILS
MEDICAL SERVICES

ORGANIZATIONAL CHART

MEDICAL
SERVICES

GENERAL MEDICAL SERVICE

We assess patients overall health through medical examinations, various diagnostic tests and high-tech procedures.

01.

Regenerative Medicine Consultation

A complete health assessment focusing on areas that can be improved with our treatments and services. It is complemented by a physical examination.

02.

Treatment Confirmation Consultation

Mandatory medical verification of the effectiveness of certain treatments that require professional confirmation.

03.

Health Assessment

Consultation with a healthcare professional, which includes a series of tests to collect the necessary information about patients health status.

MINOR SURGERIES

Ambulatory surgery is a type of surgical care that does not require significant intervention and hospitalization. Outpatient surgery or one-day surgery is not an alternative to inpatient treatment, rather, on the contrary, it complements it. It contributes to the expansion of the volume of surgical care provided and has certain advantages.

Outpatient surgery at our clinic **"KLINIK HARAMAIN"** is an effective surgical treatment in a one-day treatment, guaranteed safety and comfort, convenient planning of all necessary interventions, allowing patients to maintain their usual quality of life and get results without stress and pain.

Our doctors are appropriately classified as specialists of the professional level since they possess substantial real-world experience.

They work based on international standards and follow clinical guidelines accepted worldwide.

Precise surgical technique of interventions and careful attitude during operations by our specialists contribute to the speedy healing and early recovery.

Outpatient operations at **"KLINIK HARAMAIN"** are performed using the latest equipment under local anesthesia or (at the request of the patient) under general anesthesia. We quickly and accurately establish a diagnosis and offer a full range of necessary laboratory and instrumental examinations.

EMERGENCY TREATMENT

“**KLINIK HARAMAIN**” is an independent emergency medical service that provides emergency specialized medical care around the clock, every day, seven days a week. We provides medical care in an emergency form, under the following conditions:

- 01 Caused by sudden acute illnesses.
- 02 Carries out a statement of biological death during non-working hours.
- 03 Accidents (trauma, traffic accidents, falls from a height, electric shock, drowning, hanging, injuries, bleeding, burns, foreign objects in the respiratory tract, poisoning and suicide attempts), loss of consciousness, with the development of an acute mental disorder.

CIRCUMCISION SERVICE

Circumcision is a minimally invasive surgery to remove the foreskin, that is, the part of the skin of the penis that covers the head of the penis. It can be performed both for medical and aesthetic, religious or hygienic reasons.

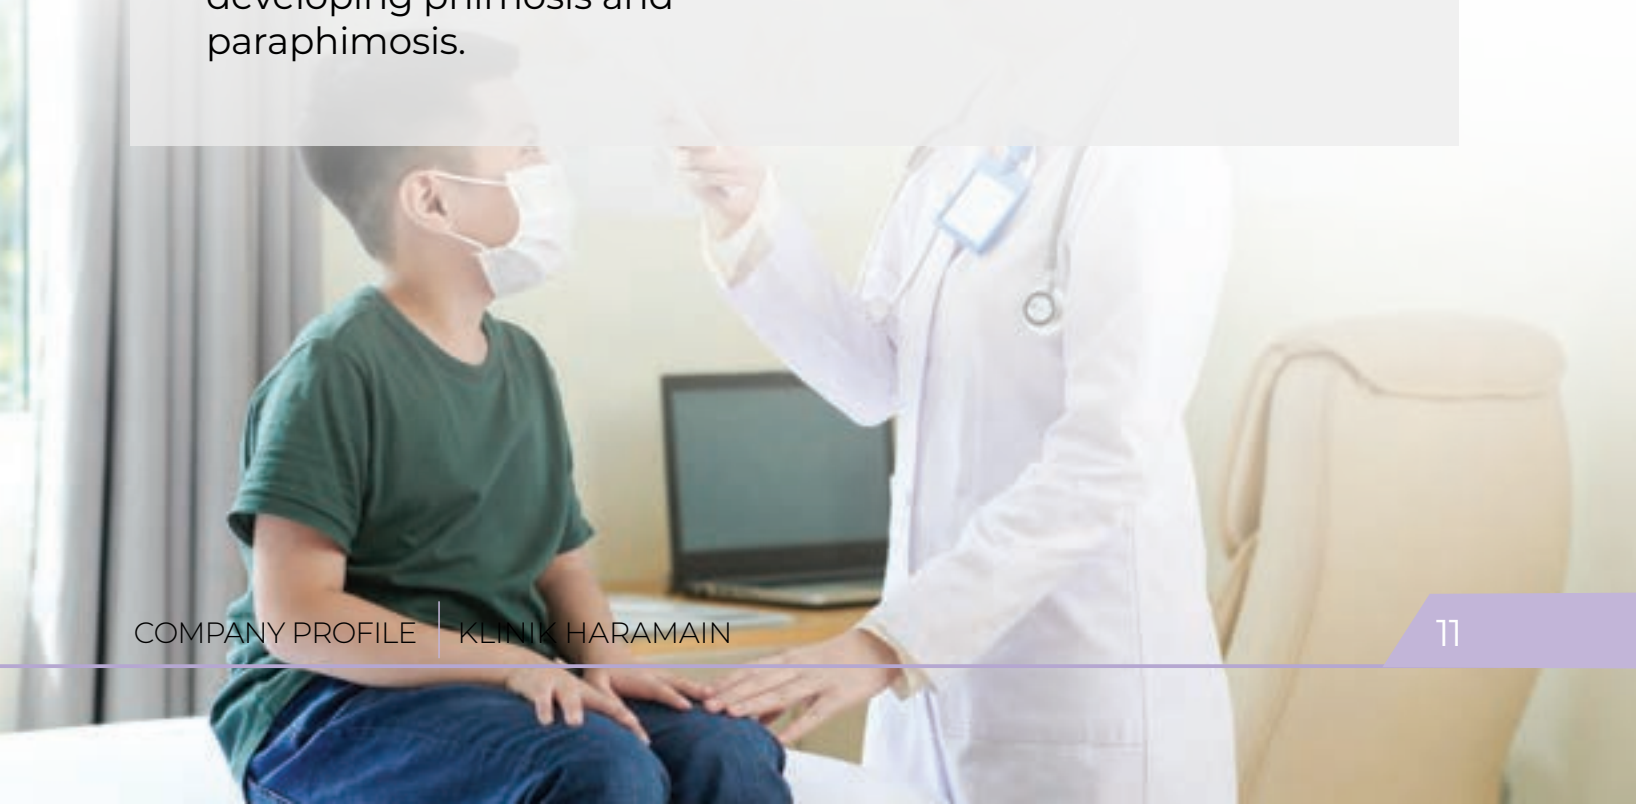

The intervention is carried out on an outpatient basis. The patient comes to the clinic on the day of the intervention.

The result of circumcision

As a result, the circumcision of the glans penis remains completely exposed. This will ensure its hygiene, reduces the incidence of inflammatory diseases, eliminates the likelihood of developing phimosis and paraphimosis.

Preparing for the operation

Before circumcision, the patient must undergo a set of examinations to assess the state of health, as well as to identify possible contraindications to the intervention. This includes a set of laboratory tests (general urine and blood tests, tests for infections, blood clotting, blood type).

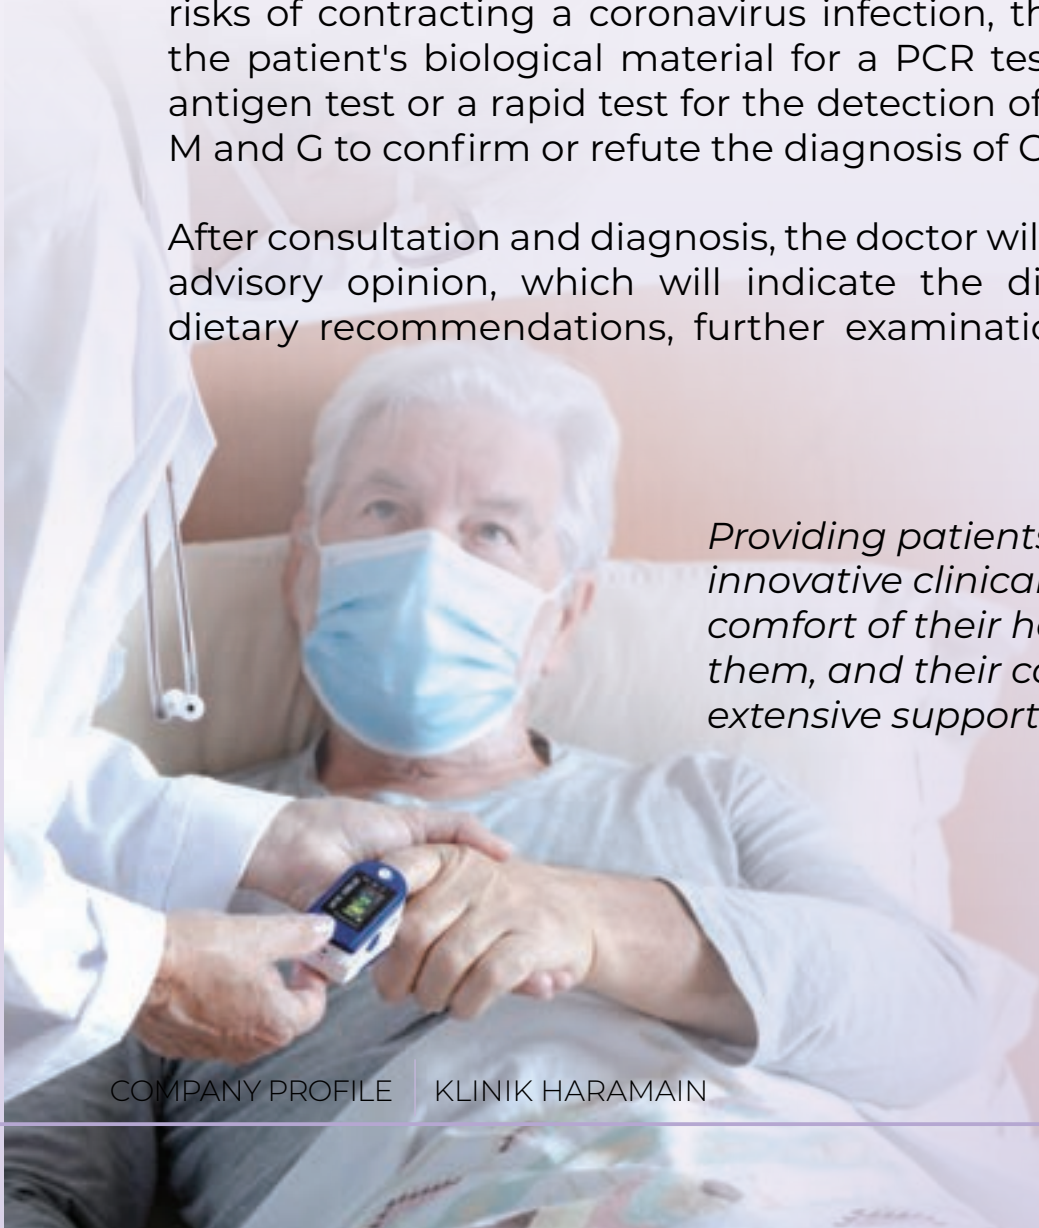

HOME HEALTH CHECK -UP VISITS

Our doctors will professionally help patients keep abreast of their health status at home without the need to go to a medical center. The doctor will come to patient's home for a consultation, examination and possible diagnosis of the disease.

A doctor on call arrives at a certain time at the specified address for a consultation, which he will ask about the patient's complaints, collect information about the state of health and lifestyle, and conduct an examination. If necessary, the doctor conducts laboratory or instrumental diagnostics, which can be carried out at home.

If the patient has symptoms of a respiratory disease or there were risks of contracting a coronavirus infection, the doctor can take the patient's biological material for a PCR test, conduct a rapid antigen test or a rapid test for the detection of immunoglobulins M and G to confirm or refute the diagnosis of Covid- 19.

After consultation and diagnosis, the doctor will definitely issue an advisory opinion, which will indicate the diagnosis, prescribe dietary recommendations, further examination and treatment.

Providing patients with a range of innovative clinical services in the comfort of their home and offer them, and their carers, an extensive support network.

IMPLANON INSERTION AND REMOVAL & FAMILY PLANNING METHODS

IMPLANON is a gestagenic drug that can be used in the early postpartum period (after 6 weeks), during lactation.

A hormonal (progestogen-containing) subcutaneous implant is a method of long-term reversible contraception. Implanon is a highly effective, safe and acceptable method of contraception

Gynecologists of the **"KLINIK HARAMAIN"** were trained in the installation and removal of Implanon.

Indications for use

Implanon is used to protect against unwanted pregnancy for the next few years. The contraceptive effect is realized due to the progestogen, an analogue of the corpus luteum of the ovaries. It directly suppresses ovulation. A few days after the installation of "Implanon" under the skin, the desired effect is achieved.

The contraceptive should be replaced every 2-3 years. This period depends on the individual characteristics of the patient and the presence of excess weight.

ULTRASOUND DIAGNOSTIC

Most women, upon learning of their pregnancy, do everything they can to endure and give birth to a strong, healthy baby. After receiving a referral from a gynecologist for a fetal ultrasound, they begin to worry about how safe this procedure is for the unborn child. According to experts, ultrasound during pregnancy does not pose a risk to the mother's or the baby's health.

Our qualified specialists have extensive practical experience in the field of ultrasound diagnostics of pregnant women, which are safe for women's health. Doctors perform 2D, 3D, 4D ultrasound for pregnant women, using the capabilities of modern innovative expert-class equipment.

Diagnostic methods using our equipment allow pregnant women to:

- 01 Get the highest quality and make the clearest picture. A wide range of special functions and scanning modes, ensures the study with maximum accuracy.
- 02 The high level of image detail and the advanced technical functionality of the ultrasound machine help the doctor to obtain an accurate interpretation of the results and conduct an effective diagnosis of fetal development already in the early stages of pregnancy.
- 03 Our equipment makes it possible to detect early defects and pathologies of fetal development. So, a 4D study helps to diagnose various malformations: heart, limbs, spine, face.

EXAMINATION OF PREGNANT WOMAN

During pregnancy, proper care of pregnant woman and the development of the fetus is especially important, with an assessment of factors that may affect the health of the fetus at birth and in the future. Pregnancy studies provide useful information from the beginning of pregnancy to the first days of a newborn's life, help to identify the most common risks and problems that occur during pregnancy.

At the Center, we carry out all the studies that may be needed during pregnancy: pregnancy test, all the necessary and recommended research for pregnant women, non-invasive prenatal examinations, coombs test for Rh conflict (rhesus) and a special set of studies for pregnant women.

Laboratory tests for pregnancy

- 01 Blood test
- 02 Urine test
- 03 Glucose analysis
- 04 Syphilis Test (RPR) .
- 05 HIV analysis .

X-RAY / RADIOGRAPHY

Radiography is a non-invasive and highly informative method for diagnosing diseases, based on the projection of x-rays onto a special film. At **"KLINIK HARAMAIN"**, we use state-of-the-art X-ray equipment with low radiation exposure, so the examination is safe for patients of any age. It also provides high-resolution, high-contrast images, making it much easier for doctors to make a diagnosis. In our clinic, patients can make a high-quality X-ray examination at an affordable price in the shortest possible time.

WHY IS IT BETTER TO CHECK WITH US?

01

High-tech equipment

We conduct research on the latest X-ray units that allow us to obtain detailed high-resolution images.

02

Safety, low radiation exposure

We use only modern digital X-ray units with a minimum level of radiation, so patients don't have to be worried on the consequences on their health.

03

Qualified radiologists

We carefully approach the selection of doctors in our team, so we managed to reduce the risk of error in the interpretation of studies to zero

04

Affordable price with excellent quality

We try to keep affordable prices for our services without losing quality: the cost of X-ray diagnostics is lower than in other clinics

VACCINES AND IMMUNIZATIONS

Malaysia government ensures that infants, children, and adults are vaccinated against vaccine-preventable diseases. All immunisations work in the same way. The vaccination boosts our immune system's ability to protect us from infection before we come into contact with it. In other words, it's as if we've been infected with the disease but aren't suffering bad symptoms.

After we've been vaccinated, our body works to stop us from getting the disease, or we may get just a mild case. Unlike other proposed approaches to immunisation (such as homeopathy), vaccinations have been rigorously tested to demonstrate their safety and effectiveness in protecting against infectious disease.

The following services are available:

- 01 Routine immunization for age-related vaccines
- 02 Vaccinations for travelers
- 03 Seasonal flu vaccine
- 04 Pneumococcal vaccines
- 05 Vaccinations for college students
- 06 Children's Immunization Program
- 07 Immigration vaccinations
- 08 Vaccinations for Covid 19

LABORATORY TESTS, DRUGS, PATHOLOGY

In order to make an accurate and objective diagnosis, a modern doctor is guided not only by examination and instrumental methods of research, but also pays great attention to indicators of the state of organs, the immune system and metabolism obtained using laboratory diagnostics. Laboratory data allow the specialist to monitor the course of the disease and the effectiveness of the treatment, as well as assess the risk of developing a particular disease for a healthy person.

Often, laboratory diagnostics reveals a pathological process in the body at a stage when there are no pronounced changes in organs and tissues, so the symptoms of the disease have not yet appeared. This is an element of the so-called pre-symptomatic diagnosis - a crucial component in detecting diseases in their early stages, when treatment is most effective.

Our laboratory is equipped with a whole range of analyzers of the latest generation. Here patients can do all the necessary tests with maximum comfort and get the results in a short time.

FOMEMA MEDICAL CHECK UP PANEL

Fomema is one and only agency to do pre screening medical health of non knowledge foreign workers to avoid unhealthy worker affect country economic and societies.

Foreign Workers must undergo the required medical examination at the chosen Doctor's clinic and X-ray centre before the doctor can submit the results to FOMEMA. They must undergo FOMEMA medical examinations every two years in order to ensure their health is in a good condition throughout their employment in Malaysia.

At **"KLINIK HARAMAIN"** , we provide Occupational Health services to foreign workers according to FOMEMA requirements. To meet their demands, we have the best doctor, attentive nurses, and the best facility.

KNEE AND JOINT TREATMENT

The knee is one of the largest and most complex joints in our body. The knee joint is prone to injury resulting in pain. Especially often the knees are injured when running. Let's look at the most common reasons of knee pain and how they can be treated.

Knee pain is more common in the elderly, overweight people (due to increased stress on the joints), and athletes. Because the knee joints are actively involved in mobility, knee pain has a significant impact on our lives. We can't do sports because of knee pain, and walking and climbing stairs is difficult.

We at **"KLINIK HARAMAIN"** offer knee gel injection services to patients with knee pain (osteoarthritis). Over 300 patients have received these injections at our clinic. The procedure is very easy and painless

Among the advantages of this Knee Gel Injection are:

1. Reduce knee pain by up to 70%
2. Reduce knee bone friction
3. Smooth the journey without any pain in the knee
4. Reduce stage 4 Osteoarthritis
5. Avoid knee joint replacement surgery
6. Control and manage emotions better
7. More active than usual

Who needs to take knee injections?

1. Grade 1 to 4 knee patients
2. Patients who cannot perform knee surgery due to age and health factors
3. Patients who are still waiting their turn for knee surgery
4. Patients who are afraid to undergo knee replacement surgery

NUMBNESS AND NERVE TREATMENT

Numbness is an abnormal sensation that can occur in any part of the body, but is most commonly felt in the arms and legs. Numbness and tingling are frequently present together as a symptom, and they might indicate anything from a minor, cooling-related numbness in the hands to a catastrophic, life-threatening disease. Numbness is a fairly common symptom. Limbs Numbness is frequently accompanied by an emotional context with a sense of detachment and a decline in emotional health, which is typically an indication of depression. Numbness is frequently caused by injury, circulatory issues, or pathological alterations to particular nerves in a physical environment.

When a patient appears with an issue like this, we try to get the relevant tests done as soon as possible so that we can prescribe an effective treatment. Medicines, physiotherapy, and manual procedures are prescribed as part of an individual therapeutic plan for each patient.

The patient will also receive extensive advice on how to live a healthy lifestyle and get enough exercise. For the treatment of numbness in the limbs, we utilise effective procedures that combine several methods to achieve the best results.
